

Sony Ericsson Noise Cancelling Headphones HPM-88

Premium high quality audio experience

Comfortable headphones with clever technology

The compact, stylish Noise Cancelling Headphones HPM-88 offer powerful sound and an outstanding audio experience, eliminating 75 per cent of all background noise.

To make the music sound even better, the HPM-88 headphones offer a great balance between base and treble so that your tunes and videos are always in perfect harmony.

As part of Sony Ericsson's commitment to unlimited mobile entertainment, the Noise Cancelling Headphones HPM-88 are powered by the handset and are battery-free, and perfectly complement most Clear audio experience mobile handsets, including Sony Ericsson's W995 Walkman™ phone.

Ideal for travelling, working and resting

The noise cancelling feature can be turned on and off to block out background noise when watching video clips, movies or listening to music on the go. The HPM-88 headphones can also be used by themselves so you can relax and enjoy uninterrupted peace, wherever and whenever you need it.

Background to the development of noise cancelling headphones

Noise cancelling headphones were first invented in 1986, based on a design from the 1950s which cancelled out the noise in helicopters and airplane cockpits to protect the hearing of pilots on long-haul journeys.

Building on Sony's expertise in digital noise cancellation technology, Sony Ericsson launched the Noise Cancelling Headphones HPM-88. These are the first in-ear canal earphones with active noise control, providing users with the ultimate in personal entertainment.
